OpenTuner DL1RF's 0.C
Remarks Auto Tune Threshold Value

- While testing the function I found that -6.0 dBb is a good starting point for the threshold

- The value is only used for tuning

- It is not used to detect „signal lost"

- This is something to experiment with

OpenTuner DL1RF's 0.C
Improvements WinterHill

- Improved startup behavior with WinterHill

- Now will try to connect to WinterHill and if connect fail show error message and stay at startup screen
